Glasswashers & Dishwashers

Fracino are the UK's official distributor of the Hoonved range of glass and dishwashers. Hoonved have been manufacturing commercial glass and dishwashers for over 40 years and they are designed for an optimum price/quality ratio. They will cope with the heavy demands of busy bar and catering operations ensuring that all glassware, crockery and cutlery are quickly and effectively cleaned to the very highest standard.

The machines are exceptionally robust and reliable with satin finish stainless steel housing and a dry seal door to prevent condensation. The door also features a safety micro switch which stops the wash cycle should it be opened during use. The wash tank has smooth contours to facilitate self cleaning. The tank filter, rotating wash and rinse arms are readily accessible and can be easily removed for daily cleaning. The machines have reliable washing and heating systems with pre-set cycle times and automatic initial tank fill. Standard features comprise built-in rinse aid pumps and automatic final hot rinse. Drain pumps and detergent pumps are fitted to most models as standard. See model specification table for details.

Ice Machines

Fracino Ice machines are elegantly designed using the latest technology in machine construction and ice production. The cabinets are produced from the highest quality stainless steel ensuring maximum durability. All machines are quiet, compact and have ingeniously designed inward folding doors providing wide access to the ice bin.

Fracino ice machines are designed for the hospitality industry including: bars, restaurants and pubs. The cubes are ideal for soft drinks and spirits and melt very slowly, allowing customers to enjoy cooled drinks longer.

Fracino ice machines produce long last ice cubes using a patented flexible spray nozzle system and are designed to prevent calcareous build-up. Fracino machines use fresh water for each ice making cycle. All machines are air cooled and function at their optimum, even in the hottest environments. All parts in contact with water have been designed to minimize their friction and to ensure maximum surface tension, substantially reducing the sound level.
