Each oven comes complete with 4 caster wheels with brakes on the front

Designed to go through narrow doorways

Each oven comes with a detailed instruction booklet, complete with drawings detailing each part of the oven, a parts list and a comprehensive troubleshooting guide.

98% of our professional spit roasting oven is manufactured from food grade stainless steel (body 430grade / spit 202grade). The bottom of the oven is sloped towards the rear and is fitted with a drain hole, this allows the fat to be drained off during cooking. This also helps during the oven cleaning process.

The oven does not have a viewing window as experience has shown us they easily fracture and quickly steam up blocking your vision. We recommend opening the lid to view, as once lid is closed the oven very quickly returns to its cooking temperature

Due to the quality of materials used in the manufacture of the oven, cleaning by hand is quick and easy but a pressure washer or steam cleaner will also be ideal. If you use a power cleaner you must ensure the motor and gas train are well protected from water ingress.

The TT mini spit roaster oven is guaranteed for 12 months against manufacturer's defects, this of course excludes wear-able parts or misuse.
